

ARE YOUR FLOOR SURFACES SAFE?

Over a third of all major injuries reported each year are caused as a result of a slip or trip. Health and Safety Executive statistics suggest that there is one serious slip accident every 3 minutes.

Using the TRL Pendulum Slip/ Skid Resistance Tester in accordance with BS 7976-2, Face Consultants can offer **Slip/Skid Resistance Testing** to assess the floor surface slipperiness in workplace and public areas.

Face Consultants services can include:-

- In situ testing in various locations, for example, reception areas, canteen, lift lobbies, station concourses, shopping centres and warehouse floors.
- Laboratory testing of proposed flooring materials, including assessment of different finishes.
- Interpretation of results including the Pendulum Test Value (PTV).
- Road surface testing.

The test results and data gathered may be used for:-

- Evaluation of floor cleaning materials.
- Accident investigations.
- Evidence for litigation purposes.

Surfaces which can be tested include:-

- Concrete.
- Ceramic Tiles.
- Resin Finishes (epoxy, acrylic).
- Natural Stone.
- Terrazo.
- Clay or Concrete Pavers.
- Timber.
- Glass.
- Flexible (Vinyl, Rubber, PVC).

For an initial discussion or to arrange a test appointment, please contact us on 01484 600090 or email duane@face-consultants.com
