

The Face Property II Meter

Compliance testing a floor to the Property II element of the TR34 Free Movement specifications can be an extremely slow process and always open to interpretation and human error when recording the data. Now a floor can be surveyed with the Face Property II Meter which tests the floor against the limits of the Property II specification. The Property II Meter produces a graph from continuous rate in change of slope over a distance of 600mm.

The Property II Meter is simply walked along the floor and the data is collected digitally. At the end of a survey run the data is downloaded to the handheld Pocket PC data collection program, and then the next run can start. When the whole of the floor is surveyed the storage card is removed and downloaded onto your PC or laptop using the supplied card reader and the survey data loaded into the Property program. At the touch of a button the data is analysed, the %error per survey line is calculated and the graphs produced for a 1, 2 and 4 metre scale. The graphs are then ready to print or e-mail as a PDF.

The complete Kit comprises of:

- Robust carry case
- Property II Meter main body
- Stabilizing Bar
- Stabilizing Wheel
- Spanners x 2
- Charger
- Steering Cable
- Handheld Pocket PC with Preloaded Software
- 1GB SD Storage Card
- Card Reader
- 4mm Shim
- PC Software

Technical Specifications:

Dimensions—Box 98x48x16 cm (LxWxH)
Dimensions—Assembled 72x32x20 (LxWxH)
Weight: 17.5kg
Rechargeable Battery 7.2v 2.2Ah NiMh
PC Compatibility: Windows®NT,2000,XP,
Aluminium Frame

Price: On Application

Includes:

1 day training at place of manufacture
Warranty—12 Months
Battery warranty 6 months
Telephone assistance free of charge

Delivery not included
